## Avlite Launches Innovative Approach Lighting Solutions

Tilton, New Hampshire, USA – 29 June 2018 - Avlite Systems is expanding its offering of airfield and helipad lighting solutions with the introduction of new LED approach lighting systems (ALS).

Avlite's new approach lighting products include a Precision Approach Path Indicator (APAPI/PAPI), Medium Intensity Approach Lighting System (MALS/MALSF/MALSR), Simplified Short Approach Lighting System (SSALSR), Runway End Identification Light (REIL) and Runway Threshold Identification Light (RTIL).

Tara Stewart, President of Avlite USA, comments on the customer benefits that the new approach lighting products will provide. "Significant cost savings can be realized through the use of Avlite's energy efficient LED approach lighting systems. Our diverse customer base of large and small, private and public, military and civilian airfields can now utilize a convenient, single source for all their airfield lighting needs."

Within the new Avlite airfield and helipad approach lighting solutions are innovative design and technology features, which position Avlite products at the forefront of the airfield lighting market.

One of the innovative designs is the use of patented LED optics in the PAPI/APAPI. The LED optics offer the sharpest light transition definition for visual glide slope guidance to pilots on final approach, helping to increasing aircraft, pilot and passenger safety.

~MORE~

Avlite's approach lighting systems can be powered by universal mains or solar. Additionally, the APAPI/PAPI accepts a constant current regulator supply. All approach systems are available in either a permanent or a portable configuration. For example, the ten foot, MALSR barrette is available in a lightweight, folding portable version for simplified transportation and installation.

Avlite's new approach lighting products are designed by subsidiary Laser Guidance Inc, and add to the company's expansive line of airfield lighting solutions.
